

Amendments to the claims:

Please replace all prior versions and listings of the claims with the following amended claims:

Listing of Claims:

- 1 1. (Previously Presented) A device comprising a cleaning head, the cleaning head
2 comprising:
3 a) a first region with a first support surface having bristles protruding therefrom, the
4 first support surface being configured to move in a first direction; and
5 b) a second region with a second support surface having a first squeegee element and
6 bristles protruding therefrom, the squeegee element having elongated walls that
7 protrude to form a curved elongated wiping edge configured to treat a working
8 surface,
9 wherein the second support surface is configured to move separately from the first
10 support surface in a second direction that is different from the first direction and wherein
11 a portion of the bristles protruding from the first support surface and the second support
12 surface flank opposed sides of the elongated wiping edge formed by the elongated walls.
- 1 2. (Previously Presented) The device of claim 1, wherein the first support surface has a
2 second squeegee element protruding therefrom.
- 1 3. (Canceled).
- 1 4. (Previously Presented) The device of claim 1, wherein at least one of the first support
2 surface and second support surface is configured to rotate or oscillate.
- 1 5. (Canceled).

- 1 6. (Previously Presented) The device of claim 1, wherein the elongated walls of the first
2 squeegee element encircles an inner squeegee region and encircles at least a portion of the
3 bristles.
- 1 7. (Canceled).
- 1 8. (Canceled).
- 1 9. (Canceled).
- 1 10. (Canceled).
- 1 11. (Canceled).
- 1 12. (Previously Presented) A device comprising a motorized cleaning head, the motorized
2 cleaning head comprising:
3 a) a first region with bristles protruding from a first support surface that is
4 configured to automatically move in a first direction; and
5 b) a second region comprising:
6 i. a squeegee member with curved elongated squeegee walls that
7 protrude from a second support surface to form a curved elongated
8 wiping edge; and
9 ii. bristles that protrude from the second support surface,
10 wherein the second support surface is configured to automatically move in a second
11 direction that is different from the first direction, wherein a portion of the bristles
12 protruding from the first support surface and the second support surface flank opposed
13 sides of the curved elongated edge formed by the curved elongated walls.
- 1 13. (Canceled).

- 1 14. (Previously Presented) The device of claim 12, wherein at least one of the first support
2 surface and the second support surface is configured to rotate or oscillate.
- 1 15. (Canceled).
- 1 16. (Previously Presented) The device of claim 12, wherein the curved elongated squeegee
2 walls encircle at least a portion of the bristles that protrude from the second support
3 surface.
- 1 17. (Canceled).
- 1 18. (Canceled).
- 1 19. (Previously Presented) The device of claim 12, wherein the first support surface and the
2 second support surface are both configured to rotate or oscillate.
- 1 20. (Currently Amended) A cleaning device comprising a detachable cleaning head
2 comprising:
3 a) a first section with a first support surface with a first squeegee wiping
4 element protruding therefrom and being configured to automatically rotate
5 or oscillate while coupled to a motorized handle; and
6 b) a second section with a second support surface with a second squeegee
7 wiping element protruding therefrom and surrounding the first section and
8 the second section being configured to automatically rotate or oscillate
9 while coupled to the motorized handle, wherein the second section is
10 configured to automatically rotate or oscillate at a rate or direction that is
11 different from that of the first section wherein the squeegee protruding
12 from the first support surface and the squeegee protruding from the second
13 support surface each has opposed walls that form elongated wiping edges;
14 and bristles protruding from [[from]] positions between the first squeegee
15 wiping element and the second squeegee wiping element.

1 21. (Canceled).

1 22. (Canceled).

1 . 23. (Canceled).

1 24. (Canceled).

1 25. (Currently Amended) A device comprising a cleaning head device comprising:

2 a) a cleaning head comprising:

3 i) [[a]] a first support surface; and

4 ii) [[b]]) a second support ~~surface~~ that is separate from the first support
5 ~~surface~~, wherein both of the first support ~~surface~~ and the second
6 support ~~surface comprises~~ comprise a squeegee element with
7 elongated walls that protrude upward from a surface of the first
8 support and a surface of the second support to form [[a]] top
9 elongated wiping ~~edge edges~~, and, wherein both of the first support
0 ~~surface~~ and the second support ~~surface comprises~~ include bristles
1 protruding upward from the surfaces of the first support and the
2 second support and ;and

b) a motorized handle, wherein the motorized handle is configured to cause at least one of the first support surface and the second support surface is configured to move automatically and independently of the other of the first support surface and the second support surface, while the cleaning head is coupled to [[a]] the motorized handle and while the motorized handle is stationary.

1 26. (Currently Amended) A cleaning device comprising:

2 a) a cleaning head comprising:

- 3 i) a first support surface with a first squeegee element with ~~a first curved~~
4 ~~elongated wiping edge~~ and a first set of curved elongated walls that
5 protrude upward from the support surface to form a first curved elongated
6 wiping edge and bristles ~~protruding therefrom~~ that protrude upward from
7 the first support surface; and
8 ii) a second support surface that is separate from the first support surface, the
9 second support surface having a second squeegee element with ~~a second~~
10 ~~curved elongated wiping edge~~ and a second set of curved elongated walls
11 that protrude upward from the second support surface to form a second
12 curved elongated wiping edge and bristles ~~protruding therefrom~~ that
13 protrude upward from the second support surface, wherein a portion of the
14 bristles protruding upward from the first support surface and a portion of
15 the bristles protruding upward from the second support surface border
16 opposed sides of the second elongated curved wiping edge of the second
17 squeegee element; and
18 b) a motorized handle that automatically moves the first support surface relative to
19 the second support surface while the motorized handle is stationary.

1 27. (Currently Amended) The cleaning ~~head~~ device of claim 26, wherein the [[the]]
2 motorized handle detachably couples to the cleaning head.

1 28. (Previously Presented) A device comprising a cleaning head, the cleaning head
2 comprising:

- 3 a) a first support surface with a first squeegee element with opposed walls that form
4 a first elongated and continuous wiping edge that encircles a portion of the first
5 support surface and is configured to treat a working surface, the first support
6 surface being configured to move;
7 b) a second support surface with a second squeegee element with opposed walls that
8 form a second elongated and continuous wiping edge that encircles a portion of
9 the first support surface and is configured to simultaneously treat the working
10 surface; and

11 c) bristles,
12 wherein at least one of the first support surface and the second support surface is
13 configured to automatically move independently and separately of the other of the first
14 support surface and the second support surface, while the cleaning head is coupled to a
15 motorized handle.

1 29. (Previously Presented) The device of claim 28, wherein a portion of the bristles protrude
2 from the first support surface.

1 30. (Previously Presented) The device of claim 29, wherein a portion of the bristles protrude
2 from the second support surface.

1 31. (Currently Amended) An electric toothbrush with a cleaning head, the cleaning head
2 comprising:

- 3 a) a first support surface with a first set of ~~bristle~~ bristles and a squeegee
4 element protruding therefrom; and
5 b) a second support surface with a second set of ~~bristle~~ bristles protruding
6 therefrom and a continuous and substantially circular squeegee element
7 that encircles a portion of the second support surface and the second set of
8 bristles, wherein the second support surface is coupled to a drive
9 mechanism for automatically rotating or oscillating the second ~~region~~
10 support surface independently and separately from the first support surface
11 and wherein the first set of bristles surround at least a portion of the
12 continuous and substantially circular squeegee element, and wherein the
13 first support surface is configured to rotate or oscillate.

1 32. (Canceled).

1 33. (Currently Amended) An electric toothbrush comprising: ~~with a cleaning head~~
2 a) a motorized handle; and

b) a cleaning head that couples to the motorized handle, the cleaning head comprising:

i.) [(a)] a first region with a first support surface having a ~~continuous and~~ substantially circular squeegee element with opposed curved walls forming a substantially circular wiping edge that encircles bristles protruding from the first support surface and wherein the first support surface is configured to rotate or oscillate with the handle stationary and coupled to the cleaning head; and

ii) [(b)] a second region with a second support surface configured to automatically move independently from the first support surface in at least one direction that is different from the first support surface while the handle is stationary and coupled to the cleaning head, the second support surface having at least one of a squeegee, bristle tufts and nodules protruding therefrom.
